

BLASDEL

CUSTOM HEAT AND MOTION TECHNOLOGIES

ADJUSTABLE-WIDTH INFRARED OVEN

The company behind the product.

Blasdel is a leading manufacturer of custom heat and motion technologies. Our family-owned company has been designing infrared and high-velocity air ovens, control panels, conveyors, pick and place robots and other specialty equipment since 1982. We treat every company as an individual with unique needs and work with them to find the best solution.

Our new Inspection and Maintenance contracts are our answer to help you keep your Blasdel equipment operating in peak condition for many years to come. Blasdel Enterprises, Inc. is proud to stand behind their equipment.

The Blasdel Enterprises, Inc. Adjustable-Width Infrared Oven is designed with the needs of the job shop in mind. Its versatile design features varying opposing widths that can be adjusted to focus the radiant panels at the appropriate distance from the product. The Blasdel design also clears the floor of wide, cumbersome framing as the sides are hung on an overhead track for both floor and ceiling-mounted models. Several types of infrared emitters may be used in this design, based on process specifications.

- Ideal for job shops
- Flexible set-up parameters
- Designed for varying parts sizes and shapes
- Rows can have adjustable angles
- Can be zoned in length and/or height
- Zones can be turned off if not needed for particular parts
- Can maintain proper heating distance
- Operation can be tailored for maximum efficiency
- May be added as a booster oven for a convection oven
