CUSTOM HEAT AND MOTION TECHNOLOGIES

## FINISHING CELLS

### ***The company behind the product.***

*Blasdel is a leading manufacturer of custom heat and motion technologies. Our family-owned company has been designing infrared and high-velocity air ovens, control panels, conveyors, pick and place robots and other specialty equipment since 1982. We treat every company as an individual with unique needs and work with them to find the best solution.*

*Our new Inspection and Maintenance contracts are our answer to help you keep your Blasdel equipment operating in peak condition for many years to come. Blasdel Enterprises, Inc. is proud to stand behind their equipment.*

Designed with the latest manufacturing theories in mind. Finishing Cells or Oven Cells can be designed around a specific, high-volume part to minimize part handling. These cells are placed near the part origin such as the molding or stamping machine. The parts are painted and immediately packaged in a very compact area. Typical oven, spray booth and conveyor cells are approximately 10' x 15', depending on the product and process.

- Small, compact footprint
- May include the conveyor in the oven cell package
- Install near the source of the parts to minimize material handling
- Customized for specific parts or groups of parts
- May be designed for liquid or powder coating processes
- Conveyor may be continuous running or indexing
- Many control options available
- Oven doors available as an option
